April-June 2011

Key points

- Overall *S. aureus* cases for Northern Ireland (NIR) and MRSA bacteraemia increased by approximately 20% during quarter (see 2011)
- MRSA rates decreased by approximately 11% (from 25.81 reported compared to quarter end 2010)
- The Report (R2) lists identified the episodes of MRSA bacteraemia during quarter (see 2011)
- MRSA cases during 2011 to 30 September 2011
- MRSA rates decreased by approximately 16% (from 42 to 35 reported) compared to quarter end 2010
- MRSA cases during 2011 to 30 September 2011
- SA rates for quarter end 2011 increased above the lower action limit for the first time working week (see the SPC chart for Northern Ireland)
- MRSA rates decreased below the lower action limit on the SPC chart for Northern Ireland
- MRSA rates remain within expected parameters on the SPC chart for Northern Ireland (Figure 6)

This quarterly report provides epidemiological data on *S. aureus* in Northern Ireland, including overall infection figures as well as those specific to MRSA and MSSA. The report highlights key points, rates, trends and statistical process control charts. The report also provides information on surveillance methods and data for each hospital and Health and Social Care Trust in Northern Ireland
