Service Development and Screening

This leaflet gives information on the blood tests that are normally offered and recommended at the first antenatal visit. These tests look for possible health problems that could affect the mother's health and the health of the baby. Only one sample of blood is needed to do all six tests. The tests are done by consent and this leaflet should help pregnant women make their decision.

Details

Format

12 pages, 1/3 A4, booklet

Target group

Pregnant women
