[Health Protection](#)

The Northern Ireland Prevalence Survey of Healthcare-Associated Infections and Antimicrobial Use in Long Term Care Facilities, also known as the 'HALT' survey was conducted as part of the 2013 European Centre for Disease Prevention and Control (ECDC) European HALT survey.

In May 2013, 42 Northern Ireland long-term care facilities (nursing and residential homes) participated in a European point prevalence survey of healthcare-associated infections and antimicrobial use. Thirty-one privately owned nursing homes and 11 HSC Trust-controlled residential homes took part.

The report and results have highlighted priority areas for future interventions to prevent and control HCAI, antimicrobial stewardship and future local and national prevalence surveys in long-term care facilities. The 2013 European report was published on 5th May 2014.
