Information on the smallpox vaccination

What is the smallpox (MVA) vaccination?

You are being offered a smallpox vaccination to help protect you against mpox.

The vaccine is manufactured in Europe by Bavarian Nordio". When you are given the vaccine, your internane system the hody's natural defence system; produces antibodies against the smallpox viso. These antibodies about also protect you against the moox viso. The vaccine contents of the terms.

The vaccine contains a virus which has been modified as that it cannot grow in the human body. This Modified Vaccine Ankara @WAVA vaccine was developed as a much ader form of the smallpox vaccine used widely in the UK and abroad into the 1970s. The MVA vaccine does not contain smallpox virus and cannot spread or cause emploos.

[1] The vesseline is satisf invesses in the UK and Europe, dynamics in the US and invesses in Canada. These all contains the same MKK vanishes and are made by the same extremes.

What is MVA used for?

As mpox is caused by a virus similar to smallpox, vaccines against smallpox are expected to prevent or reduce the sevenity of the mpox infection.

Inwares vaccine has been authorised by the UK's Medicines and Healthcare products Regulatory Agency (MHRA) to protect against smallpcx.

Although the same MNA vaccine is licensed for use against mpox in the US, the vaccine is not yst licensed for use against mpox in the UK. Because of this and because you may be receiving vaccine which has been packed and labeled for use in the US, the vaccine you have is considered "uniformed" or "off-license" in the UK. This should not make any difference to you, as your health care professional is recommending the vaccine in line with national advice.

The Public Health Agency and the Joint Committee on Vaccination and Immunitation (JCVI) recommends the use of MVA vaccine as part of the response to cases of mpcs.

This leaflet is for those people being offered the smallpox vaccine to protect against mpox. As mpox is caused by a virus similar to smallpox, vaccines against smallpox are expected to prevent or reduce the severity of the mpox infection.
