How to protect your baby from RSV

A guide to the Respiratory Syncytial Virus (RSV) vaccine for pregnant women

From September 2024, pregnant women can have a free vaccine in each pregnancy, to protect their babies against Respiratory Syncytial Virus (RSV).

From September 2024, pregnant women can get vaccinated to help protect their babies from Respiratory Syncytial Virus (RSV), a virus that affects the lungs and can be very serious for young babies.

Women will be offered the vaccine at their antenatal appointment around 28 weeks.

A large print accessible Word version of this leaflet is available below.
